

PLEASE READ BEFORE INSTALLING

ADMORE LIGHT BAR

STANDARD & PRO MODELS

QUICK START GUIDE

WHAT'S IN THE BOX

- 1 x Light Bar
- 1 x Offset Bracket
- 1 x Connector Kit
- 1 x Hardware Kit
- 2 x Support Brackets

THANK YOU!

FOR YOUR PURCHASE

You have purchased one of the most sophisticated safety lights available. When installed correctly, your Light Bar will work with your bike's tail/brake and turn signal lighting.

The *Pro* model will also work independently of your bike's lighting by activating the brake light when deceleration is detected. Many of the Light Bar *Pro* features can be adjusted using the AdMore Connect App and your smartphone.

PLEASE NOTE: We make no guarantee that the AdMore Light Bar is legal for street use in your area. You should never rely on your AdMore Light Bar alone – always ensure that your stock brake light and turn signals are functioning properly. The AdMore Light Bar is intended to complement your bike's original safety lights for added safety.

PLEASE SEND US PHOTOS!

We would love to see your AdMore Light Bar on your bike. Send us a photo by scanning the QR code.

1. INSTALLING THE LIGHT BAR

- a. The AdMore Light Bar is generally installed in one of the following locations:
 - Above (recommended) or below the license plate
 - Below a top rack
- b. The included main offset bracket allows the AdMore Light Bar to be installed above or below the license plate without obscuring the license plate
- c. A straight bracket is also available at admorelighting.com for mounting locations where an offset bracket is not required or is less desirable
- d. Place the offset bracket behind the license plate and secure the AdMore Light Bar using the hardware provided
- e. For below-license plate installations:
 1. The included aluminum support brackets **must** be installed (in addition to the main offset bracket) **OR**
 2. The optional AdMore Splash Guard (available at admorelighting.com) **must** be installed
- f. Adjust the angle of the AdMore Light Bar as desired (typically an upward angle of 5-10 degrees works well)
- g. Flush mounting is also an option using 2 x M5 screws with a minimum length of 12mm (not included)

Need help mounting your Light Bar? Check out our AdMore install video: admorelighting.com/LBP

2. CONNECTING THE LIGHT BAR

AdMore Light Bar	Function	Your Bike Wire Colors
Red	Power	
Blue	Brake	
Green	Right Turn Signal	
Yellow	Left Turn Signal	
Black	Ground	

Need help figuring out the wiring on your bike? Scan the QR code to check out our **Wiring Help Page**.

Still need help? We maintain a significant database of wire colors for a wide range of motorcycles and scooters. Contact us at admorelighting.com/contact-us

3. USING THE ADMORE APP *(PRO MODEL ONLY)*

- Download the **AdMore Connect** App from the App Store (iOS) or the Google Play Store (Android)
- Create an account to log in
- Select **Devices** and then tap **Add Device** to add your Light Bar *Pro* (*Make sure you're within 2-3 ft of your Pro Device to ensure it connects*)
- Configure the features of the Light Bar *Pro* to meet your preferences and/or local laws
- Use the Dashboard buttons to test your Light Bar *Pro*

WARNING: BEFORE INSTALLING

1. **DO NOT** install upside down or water damage may result.
2. When mounting below a license plate, the included flat, aluminum, support brackets (2) **MUST** be used. These brackets provide support to the license plate and to the main, black mounting bracket. When using the flat support brackets, they must be hidden behind the plate (i.e. no part of the flat support brackets should extend past the plate). The bolts must go through the (not in any particular order):
 - a. Flat, support bracket;
 - b. Main light bar bracket; AND
 - c. License plate hole.
3. When mounting the Light Bar below a license plate, we highly recommend the optional AdMore Splash Guard (available at admorelighting.com). The Splash Guard is particularly important to protect your Light Bar if your rear tire is exposed as it will throw road debris and excessive amounts of water at the back of the light bar thereby decreasing its life span. Protect your investment!
4. Make sure the Light Bar is mounted securely to the main mounting bracket and that the Light Bar cable is secured away from the rear wheel, any other moving parts and the exhaust system.
5. Do not use high pressure water to clean the Light Bar.

WARNING: BEFORE RIDING

ENSURE THAT:

1. Your AdMore Light Bar is securely attached to the main offset bracket (also to the additional two (2) support brackets if mounted below the license plate).
2. Your AdMore Light Bar is functioning correctly and that your original equipment lighting including tail light, brake light and turn signals are operating.
3. All wiring is properly secured and away from moving parts and hot exhaust components.

TROUBLESHOOTING

- Ensure that all wires are connected as per the chart
- If the Light Bar still does not work, test by connecting the Red wire directly to a 12V source (battery) or powered circuit and the Black wire to a good ground
- Contact us at admorelighting.com for additional support or enquiries
